**Computer Basics** Before you begin using Photoshop, you'll need to understand several basic computer concepts. You'll need a computer with at least one standard hard drive (examples are the 500 MB and 700 MB Hard Drive versions of Windows). A program such as Photoshop requires a minimum amount of memory (RAM) to work with. For example, Photoshop works best when the RAM is at least 512 MB. You'll also need a mouse. You can use a mouse with Windows 2000 and greater, but you may need to purchase a separate mouse for Windows 95 and earlier. Most models are relatively inexpensive. To install Photoshop, you'll need to purchase a copy from Adobe or download it for free from Adobe.com. Figure 1. Double-click on the user account to change the properties or right-click on the icon, then choose the Properties option to change the properties. Click the Change button to change the account to administrator, then click OK. If you want to make this change for all the users on the computer, click the Apply to all Users option on the Change tab.
