This chapter is not only for professional photographers; rather it's for anyone who enjoys using this popular software. Photoshop is so much more than just a pretty picture; it has many powerful features that will help you to create, enhance, and manipulate your images. Become a Photoshop Pro Unless you've been using Photoshop for a number of years, you may not be familiar with the many powerful features. In this chapter, we discuss these tools and how they can enhance the visual aspects of your images. Photoshop includes tools for working with the various types of colors found in color images. Figure 2-1 demonstrates some of the tools and commands available for working with colors in Photoshop. Photoshop has many plug-in components that extend its functionality. If you don't have an existing plug-in component on your computer, you can purchase one to extend the software. Plug-in components include image-editing tools and Photoshop software tools like the Healing tool and the Liquify filter. The following sections explore these features and show you how they can enhance your images. Figure 2-1: Many tools, commands, and features in Photoshop come with their own in-depth help systems. The Photoshop CS3 Help system features a glossary and FAQs that will help you in the process of using Photoshop. You can access the Help system via the Help palette, which can be accessed in any open image via the Help menu. Getting up and running Photoshop offers several ways to get started working with your images. Most of the time, you start by opening an image in Photoshop. In the following steps, you will take a sample image, edit it, and save the final product. 1. Open your image in Photoshop by choosing File⇒Open. 2. Choose File⇒Save. The Save dialog box appears. 3. Navigate to the appropriate folder where you will save the file. Choose a location and name for your new image file. This location may be on your hard drive, a CD or DVD, or even another computer. 4. When you're ready to save the image, click Save. Your new image appears. Creating images using layers When you edit an image, you often work with multiple layers on a single image (see Figure 2-2). Each layer represents one facet of the image: for example, background, foreground, skin, and so on.

Tuesday, December 22, 2012 Alas, I am not available on Christmas Day. So, I figured that, if I am not on the air, maybe I'll be online. That was a bad assumption on my part. I'm at my sister's house, and we are trying to get up to our cabin for the weekend. Driving is just not happening for me. Mom-to-be me is on the verge of a serious meltdown, and everything is slowing down to a halt. Sorry! So, instead, I am offering up some oldies but goodies -- 50 tunes to get you through the week. I am starting with Bon Jovi, however, because I've had the itch to play something from The Cars' Rental Car, and they're not on this list. You'll notice the year on the side of the button next to the artist. It's the year that the record was originally released. I may lose some of you in the shuffle, and if I do, I apologize in advance. So, here are some sounds to help you get through the week, starting with a '60s cover from The Association: The Association -- (Somewhere in the Middle) You need to start now Because when you're older, this moment Will seem like A wasted moment And the one from Neil Young's "Everybody Knows This Is Nowhere" -- "A saint can wear a suit and tie. But a saint can't get a job. Can't get a home, Just can't pay the rent. Can't get a woman, All he has is a car. I'm a no-good father There's nothin' in this world I haven't tried So I guess I must be the person You are looking for." Today's G&P Driveby is a salute to "Merry Christmas, Darling." I like the Holiday classic so much, I included four songs on the record. So that's it for today. It's good to be back. I hope you have a safe and happy Holiday! Welcome I'm Todd Paull, owner of KLIN. I'm a southern singer-songwriter and a radio host. I don't like country music, but I do like country radio. You should, too. If you like it, that is.

Q: If Statement syntax clarification Consider the following code: `def f(x): if x > 'g': return x else: return 0` Is the above code the same as this: `def f(x): return x if x > 'g': return 0 else: return x` In essence I want to know if the if statement is evaluated at run-time. And if it is what does it mean by the if statement being evaluated A: These are equivalent. In Python, an assignment statement in an if block first evaluates the left side, and then it assigns the result of that evaluation to the variable in the conditional. Then the if block is executed, and if the conditional expression is True, the block runs, and the variable gets the value of the right side. The if statement is itself not evaluated at run time. From the "Python Reference" entry on if: If the body of the if statement is executed, the expression is evaluated, and if it is true, the else clause and the optional else-test are executed. In this case, the value returned is the value of the last expression executed in the body. In addition, the body of an if statement is not executed in a with statement. Therefore, this also means that the if block is not executed when you use a with statement. A: Yes. The if statement is evaluated at run time. Evaluating the condition directly is simply shorthand for: `if x > 'g': x = x` Please note that all else: blocks only execute if you didn't explicitly return anything with previous line. And the function returns anything which was returned by the last return. The quest for a national antimicrobial strategy: current controversies and future directions. The global increase of antibiotic resistance is of critical concern. The national antimicrobial strategy addresses the practice of antimicrobial prescription in a society. The increasing incidence of clinical and laboratory documented infections with antibiotic-resistant pathogens is the main challenge for national antimicrobial strategy.
