AutoCAD history Autodesk AutoCAD was first released in December 1982. When the first release was completed, it only ran on a single Apple II. By the time version 2 was introduced, it ran on two or three Apple IIs, and in 1984 a third version was introduced on the Apple IIGS. With the release of AutoCAD version 3 in 1986, the Apple IIGS was replaced by the Apple IIe. Version 3.0 introduced Xref-ed drawing support. The Apple IIGS version of AutoCAD continued to be updated and released after the introduction of the Apple IIe, and with the introduction of version 5.5 in 1995 it became the default version on that platform. Although the Apple IIe and IIGS versions were both designed to be used on a single Apple II, they were not compatible with one another, so version 3.0 could only be used on the Apple IIe, but not on the IIGS. Between the introduction of AutoCAD version 5.5 and version 6, AutoCAD was ported to the Atari ST, Commodore Amiga, and MS-DOS, with version 6 being the first release to be cross-platform compatible (although earlier versions had been ported to the Atari ST). The Atari ST version was re-released in 1998 for the new ST, with additional features and bug fixes. On January 1, 2008, Autodesk announced the launch of a new web-based version of AutoCAD, an Autodesk Labs product. This product, initially called Autodesk Labs AutoCAD 360, was renamed Autodesk 360 AutoCAD in late 2010. Autodesk 360 AutoCAD is also available as a mobile app and web app, as well as the ability to use AutoCAD on MacOS and Windows on a desktop PC. The mobile version was discontinued in February 2016 and it was replaced with the Autodesk Mobile App. AutoCAD History As with other Autodesk software, the first version was a DOS-based app developed by Pixxel. It was first released in 1982 and was available for the Apple II, Atari ST, Commodore 64, and MS-DOS computers. There were two versions of AutoCAD, Autocad and Autocad LT. The Autocad LT version was for personal use only, so you could not make a permanent copy of it. The Autocad version, in

My PHP/MySQL system supports the regular expression pattern '...', but does not support the UTF8_general_ci collation. SELECT * FROM... WHERE... NOT REGEXP(...); This is ok for me because I don't need to use regular expression patterns in this particular context, but I need the database to understand the UTF8_general_ci collation. When I do this in MySQL, the generated SQL is like this: SELECT * FROM... WHERE... NOT REGEXP(...) COLLATE UTF8_general_ci; Because of the COLLATE clause MySQL produces the characters Å, Ä, Å etc... for non-ASCII characters, but also NULL values. This is not very convenient for me. I need to find a way to get this SQL statement with the UTF8_general_ci collation, so that I can use regular expression patterns. I tried UNICODE() and CHAR() functions, but the collation is lost if I do this. A: You could use a regular expression that contains the regular expression used for the negation. SELECT * FROM... WHERE... NOT REGEXP(...); But if your database does not understand the regular expression pattern, then you will have to wrap it in a function. In MySQL you could do this: SELECT * FROM... WHERE... NOT REGEXP(...); CREATE FUNCTION LIKE_REGEXP(pattern varchar(255)) RETURNS varchar(255) BEGIN DECLARE x, y, z, a, b, c, d, e, f, g, h, i, j, k, l, m,

What's New In AutoCAD?

AutoCAD provides a variety of ways to integrate third-party content in your designs. The Markup tool enables you to import any type of content from any source into your drawing including formatting of tables, graphs, equations, images, hyperlinks, and even clickable thumbnail previews of PDFs and printed paper. You can add custom text, shapes, dimensions, and even annotations. For more information see Markup Import and Markup Assist: Support for Markup Assistant. (video: 1:30 min.) This video covers Markup Assistant: Interactive Markup, which is available in AutoCAD LT 2020. 3D Modeling for Virtual Reality: Increase your designs' visibility by sharing designs in three dimensions with clients in virtual reality and augmented reality applications. Preview your model in different orientations and hide elements and create geometric spaces to increase the visibility of your designs. Use AutoCAD's 3D Cursor to reposition your model for presentations or for better visibility. You can make AutoCAD 3D Cursor predefined, customize it to your preferences, or use a preset. You can share your model with your clients by exporting to Google Earth, making them available in Google Earth VR and Google Street View. 3D preview: (video: 1:03 min.) 3D model: (video: 3:11 min.) 3D print: (video: 1:40 min.)
