Overview In this tutorial i will give an overview of how you can list the files in a disk partiton. Just as with the basics of a computer, disk partitions are a basic part of the data that we store in the computer. Disks are physical tools and if you need to do anything with the data you have stored on your computer you must make sure to keep that data safe. As it is just bits of data on disks, you may think it will be easy to mess up, but you may not be aware of what you can do to your disks if you do not keep your data safe. One way to keep your data safe would be to back it up on another storage method. Backing up your data means copying all of your data to an external location, so you can recover it in case you need to. Do not use your computer, in this case a laptop. DiskPart is the way to access and manipulate the files on your hard disks. As you may have guessed, DiskPart is a part of the tools that are included in Windows and it is a command line tool. Most of you, if you have experience in using Windows command line have tried to open the command prompt window to access DiskPart. It may seem scary at first and you can feel a bit overwhelmed. But it is one of the tools that you need to fully utilize your computer. It is a powerful tool that can move data from disk to disk or even resize disk partition by just clicking a button. You must know and understand all of the windows features. It will be a lot easier for you to use DiskPart if you are aware of how to navigate and how to manipulate disk partitions. There are many commands you need to know. Each of these commands can be used to move, copy or resize disk partitions. Each command can be executed from command prompt or Diskpart. Here we will only cover the first two commands. Diskpart Feature Location For these commands, you need to access the Diskpart feature. This is a command line utility and can be found in the DiskPart folder. There are two ways to access it
