Why convert text to audio? How the Converter works Settings area Convert to Text Record or Import audio file Recording an audio file How to convert text to audio Convert text to audio Speech to Text Converter provides two applications in one: an audio recognition tool and a text translator. What it actually does is take an audio file as input, convert the audio to text and then translate the output to the target language. Unlike other applications of its kind, Speech to Text Converter does not rely on one of the well-known translation engines to carry out its tasks. Instead, it supports the IBM Cloud Speech to Text API. In other words, it provides a desktop application for IBM Cloud users that extracts audio from a file and turns it into text, also performing a language translation in the process. Record or import an audio file to convert to text The simplest interface layout greets you as Speech to Text Converter is launched. The main window only comprises a field where you can browse for the input audio file and another to select the target language. A few large buttons in the toolbar are available to offer basic functionality: opening a file, saving the output to a text file or accessing the settings. Speech to Text Converter can load an audio file located on your computer, supporting common formats, such as MP3, FLAC, WAV, OGG, WEBM. Alternatively, it comes with a built-in recorder, which enables you to create a new audio file on the spot. Evidently, the computer needs to be equipped with a microphone to be able to use the recording function. As soon as you hit the "Convert" button, Speech to Text Converter navigates to the Settings area, prompting you to enter the IBM Cloud Speech to Text API key. With a single click, you can go to your IBM Cloud account to get the key you need. A speech recognition and translation tool for IBM Cloud users The Speech to Text Converter application is only useful if you are already an IBM Cloud user. The Speech to Text API key is mandatory for the converter to work. To put it another way, it cannot be used freely by anyone, as it is designed specifically for those who own an IBM Cloud account. History IBM's RoboHelp Version 7.0, released in September 2010, added speech-

Quick and accurate speech to text conversion has never been easier. Add a audio file to analyze, choose the language of conversion and hit convert. The application will then work in the background to automatically turn your audio content to text. In just a few simple steps, you will have a neat.txt file that you can download or share with any other application. Exporting.txt Files to Drive from Speech to Text Converter You can export.txt files from IBM Cloud Speech to Text API. The exported.txt files can be viewed by other people on their computers. To get a.txt file from Speech to Text API, use the export function provided by the API. Besides exporting.txt, it also provides a way of exporting data to.csv and JSON. The exported.csv or JSON can be used in other applications. When you access the API, it shows the method "export()" as a list of ways to export data. After you have selected the export method, Speech to Text API gives you the URL you need to access the export function. If you do not have an API key, you cannot use the export method. Exporting data from the API is not as simple as just picking the method. You should know that the method export is for internal use only, and there are certain requirements for the data you want to export, such as the method you need to use, which language you want to use and which audio format you want. There are many export methods in speech to text API. You can select from the following methods to export data: Mark Segal and Mark Kim. Speech to text.
