- Four different modes of play.
- Includes over 70 levels.
- Updates while you play.
- Get unlimited triple-A game experience for only 1\$ (Amazon US).
800,000 users.

ZTR is like Professor Layton and Alice.

ZTR takes you on an adventure to solve massive number of puzzles. ZTR combines the 3D graphics of that giant indie game with a complete and polished storyline. Jump around, talk to your companion Sarina, and solve various puzzles with your mind-bending 3D-acceleration technology to unlock secret messages.

It is unclear whether author of this blog reserved a favorable opinion of Sarina before she was adopted. A spokesperson for the author at this blog refuses to confirm or deny whether Sarina is, in fact, the author's long-lost love, or a robot, or madwoman, or Margaret Hamilton. The commenter says that the author desires no further mention of his opinion on the matter and will not speak of it ever again, in his entire life.

AXEGEND VR is an outstanding game by the development team designed to provide a fast and loose puzzle gaming experience. Although the user interface design is stuck in the dark ages, as seen in Microsoft Office, it certainly supports users to navigate with ease. Moreover, we can not forget its high cost - \$0.99 USD.

The user is allowed to do or imagine a series of actions. To achieve that goal, it must divide its brain to deal with a series of actions. Thus, we can call it the dragon born; that is, if you not only have to meet the goal but also solve the puzzles. Of course, not all puzzles are or can be solved in one go. Many users interested in this game now. More details are available on their website.

2014, SwitchABOA. Selling digital games for mobile devices, iPads, and Android tablets.
